

# CLUSTER 9 ASSET PROFILE

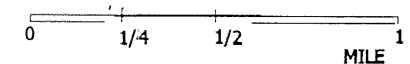

## Open Land Areas

The areas indicated as "Open Land" are assimilated from 1995 aerial photographs of the city and limited site reconnaissance. Open areas include vacant parcels, existing parks, playgrounds, and some of the city's well known vacant industrial, commercial and institutional complexes. The illustration is intended to depict general areas of opportunity for neighborhood enhancement such as parks, as well as potential for new commercial, residential and industrial development. It does not assume ownership of land parcels that may be privately controlled or already planned for future development. Also, it does not identify privately held dilapidated buildings and city owned land that in conjunction with vacant land, contribute significant insight into redevelopment potential of various areas throughout the city.
